ADP Assignment No : 1

Page No.		
Date		

A) Define a problem statement and give a brief executive summary snapshot.

A) Executive summary

B) Project description

C) Project scope

\* Problem statement : In villages there are so many pets that will be facing health issues also some pets are dead just because of lack of pets healthcare services.

A) Executive summary snapshot.

- Analysis of problems : In villages the number of pets healthcare centers is very less and the pets number is more and also it will increases more and more. No one can try to help of pets by taking them and giving them to healthcare centers for their good treatment.

• Proposed process :

For providing good healthcare services to the pets in less time we can make an app or website in which users can save their pet by uploading the condition of pets from photos and by sharing their live location without touching them...

## B] Project description.

- Project purpose : Day by day some species of animals are being attacked. Due to this lifecycle of animals will break and maybe this will cause a big problem in future.  
some species kill either animals or either humans but some species' number decreases because of health issues and some viruses are mainly dogs and cats.
- Current solution : In our website we can provide a treatment for wild animals as well as pets and reptiles. Also we can help to save a species that is on the verge of extinction. Also we can give a prize to that person who saves more animals at the end of the year.
- Challenges : Maybe there are so many problems that we are facing in this journey like website or app handling, managing users, making user-friendly apps and so many things. But the major problem is we have to update every single second because whenever the user uploads a pet unhealthy condition on the website we want to get action as much as possible.

Also we want a big community of doctors, ambulances, and other staff.

### e] Project scope.

- Project specific goals :-  
our organisation wants to give same priorities to humans as well as animals and also making a good relation in between both of them because of some people don't like animals they are don't touching them but without touching them they are helping them also it makes an animal friendly environment.
- Tasks :-  
Handling website capacity, bugs and making it user friendly. For managing more users we want to make more websites that include the main website whenever either one is not working then user can login with another one.  
Reducing lats and bugs in website by giving feedback from users and fixing it in the next update to make it more user-friendly.

- costs ÷ our application is fully cost free as well as tax free. It is not for any personal management. But you can support our organization by giving charity and some other things in charity section that you want us you wish.

- deadline in coming month maybe this our organization and websiter are in properly working and try to make animal friendly world.
